

# STINK BUG MAZE

## ACTIVITY SHEET

Although nearly 250 of the world's 4,700 stink bug species live in the United States and Canada, they didn't always live here. Stink bugs actually come from China and other parts of Southeast Asia, and they first arrived in the United States in the mid-1990s. When a plant or animal is found somewhere other than the place it came from, it's known as an **invasive species**.

Help the stink bug travel from China to the United States in the maze below.
